Eye Movement Desensitization and Reprocessing ist eine von der US-amerikanischen Literaturwissenschaftlerin und Psychologin Francine Shapiro in den USA entwickelte Behandlungsmethode der Posttraumatischen Belastungsstörung. EMDR ist eine traumafokussierte Intervention, die nach einem strukturierten Fokussierungsprozess in einen assoziativen Prozess der Verarbeitung mündet. Beide werden von rhythmischen durch den Therapeuten bzw. die Therapeutin mit der Hand geführten ...

[Was ist EMDR? - emdria.de](#)

Eye movement desensitization and reprocessing (EMDR) is a form of psychotherapy developed by Francine Shapiro starting in 1988 in which the person being treated is asked to recall distressing images; the therapist then directs the patient in one type of bilateral stimulation, such as side-to-side eye movements or hand tapping. According to the 2013 World Health Organization practice guideline ...

Background: Eye movement desensitization and reprocessing [EMDR] is an innovative, evidence-based and effective psychotherapy for post-traumatic stress disorder [PTSD]. As with other psychotherapies, the effectiveness of EMDR contrasts with a limited knowledge of its underlying mechanism of action. In its relatively short life as a therapeutic option, EMDR has not been without controversy, in ...
